the purpose of our research is to enhance the efficiency of ai problem solvers by automating representation changes we have developed a system that improves the description of input problems and selects an appropriate search algorithm for each given problem motivation researchers have accumulated much evidence on the importance of appropriate representations for the efficiency of ai systems the same problem may be easy or difficult depending on the way we describe it and on the search algorithm we use previous work on the automatic improvement of problem descriptions has mostly been limited to the design of individual learning algorithms the user has traditionally been responsible for the choice of algorithms appropriate for a given problem we present a system that integrates multiple description changing and problem solving algorithms the purpose of the reported work is to formalize the concept of representation and to confirm the following hypothesis

an effective representation changing system can be built from three parts a library of problem solving algorithms a library of algorithms that improve problem descriptions a control module that selects algorithms for each given problem

to see objects that live in the fourth dimension we humans would need to add a fourth dimension to our three dimensional vision an example of such an object that lives in the fourth dimension is a hyper sphere or 3 sphere the quest to imagine the elusive 3 sphere has deep historical roots medieval poet dante alighieri used a 3 sphere to convey his allegorical vision of the christian afterlife in his divine comedy in 1917 albert einstein visualized the universe as a 3 sphere describing this imagery as the place where the reader's imagination boggles nobody can imagine this thing over time however understanding of the concept of a dimension evolved by 2003 a researcher had successfully rendered into human vision the structure of a 4 web think of an ever increasingly dense spider's web in this text stephen lipscomb takes his innovative dimension theory research a step further using the 4 web to reveal a new partial image of a 3 sphere illustrations support the reader's understanding of the mathematics behind this process lipscomb describes a computer program that can produce partial images of a 3 sphere and suggests methods of discerning other fourth dimensional objects that may serve as the basis for future artwork
